PROBLEM STATEMENT

Title name: Truth Lens

Users frequently receive Whatsapp forwards that may contain false information or unsafe links. However, there is no quick and simple way to verify whether the content is real or fake. Many users trust and forward such messages without checking, which spreads misinformation. This can lead to scams, panic, and loss of time. Therefore, there is a need for a fast and reliable verification system.

Cyber-Fraud Cases in India: A Steep Climb

120% Rise in Just 2 Years

Reported cyber-fraud cases surged from **10.29 lakh in 2022** to **22.68 lakh in 2024** – more than doubling in 24 months. WhatsApp remains the primary vector for social engineering attacks targeting everyday citizens.

⊗ Every 14 seconds, a new cyber-fraud complaint is filed in India.

Anatomy of WhatsApp Scams

Three Dominant Scam Types

Lottery & Cash Prize scams (45%) lure victims with fake winnings. **Fake Job Offers (42%)** exploit unemployment anxieties — spiking post-pandemic. **Impersonation & OTP fraud (13%)** enables account takeovers and identity theft.

⚠ Together, these three vectors account for 100% of reported WhatsApp-originated fraud cases in India.

Who Is Being Targeted?

Senior Citizens

Disproportionately targeted via lottery and impersonation scams; lower digital literacy increases vulnerability.

Job Seekers

Fake recruitment messages on WhatsApp exploit unemployed youth, particularly in Tier-2 and Tier-3 cities.

Small Business Owners

Targeted through fake payment links, GST fraud messages, and impersonation of bank officials.

First-Time Internet Users

Rural and semi-urban new users with no prior exposure to phishing tactics face the steepest risk curve.

OBJECTIVES

Our objective is to empower users to verify forwarded content instantly using AI-driven analysis and trusted sources.

Quick Verification

Provide instant results for text, links, and media.

User Trust & Safety

Protect users from scams, fraud, and harmful misinformation.

Community Engagement

Enable ratings, crowdsourced cases, and shareable trust badges.

Scalability & Impact

Expand via WhatsApp bot, browser extensions, and partnerships with fact-checking organizations.

ABOUT TRUTH LENS

Our platform goes beyond simply flagging whether a WhatsApp forward is reliable. Each piece of content is evaluated and assigned a Trust Score out of 100, giving users a clear measure of credibility. Alongside the score, we provide a concise explanation that highlights the reasoning behind the assessment. Taking it a step further, we also offer actionable recommendations, guiding users on what to do next — whether to share confidently, verify further, or avoid spreading misinformation

Text Verification

Copy, paste and know the truth!!!

Audio/Voice Message Verification

Voices verified, trust amplified!!!

Video Verification

From viral clip to verified fact!!!

Link Authentication

Click with confidence!!!

FEATURES OF OUR TRUTH LENS

Can input text,
audio, video and
link.

Reliable results
as many
resources and
databases are
used.

Each forward
gets a 'Trust
Score' out of
100, showing
how reliable it is.

It provides a clear summary
explaining why the message is
genuine or fake, along with
practical recommendations
on what to do next.

Technical Details

User uploads text, audio, video, or link (from apps like WhatsApp)

Frontend sends data securely to backend via APIs

Backend analyzes input using AI:

Text → NLP verification

Audio → speech-to-text + analysis

Video → frame & deepfake checks

Link → phishing & safety checks

Impact

- Reduces spread of fake news across text, audio, video, and links
- Enhances digital trust and information reliability
- Helps users detect deepfakes, scam links, and misleading claims
- Promotes safe online behavior and awareness
- Supports society in fighting misinformation at scale

Benefits

- Instant verification of text, link, audio, and video
- AI-powered analysis for accurate results
- Provides trust score with clear explanation
- Helps users avoid scams and misinformation

FUTURE SCOPE

- Integration with messaging apps like WhatsApp
- Browser extension for real-time link warnings
- AI-based detection for improved accuracy
- Multilingual support for wider accessibility
- Real-time user reporting and community database
- Expansion to detect deepfakes and advanced scams

Conclusion

- Provides a fast and simple way to verify suspicious links
- Helps reduce the spread of scams and misinformation
- Easy to use for everyday users without technical knowledge
- Combines basic checks with trusted tools like Google Safe Browsing API
- Saves time by giving instant verification results
- Can be expanded into a complete digital safety platform

THANK YOU
